

AEM Home (fka Cloud Manager): Project Basecamp

Objective

[Experience.adobe.com](https://experience.adobe.com) as it exists today has grown over time into a proliferation of use cases to support various personas under various use cases across different AEM solutions. This creates confusion, friction, and does not deliver aha moments to our customers at the appropriate moments. Additionally, it introduces friction that costs us competitively in the market.

The goal is to:

1. refresh, modernize and Reorganize [Experience.adobe.com](https://experience.adobe.com) into a new "AEM Home" all the things built for different personas.
 - a. The cloud manager flows for developers, business owners for license reporting, Sysadmin like provisioning.
 - b. For Marketers: Insights + Success Studio
 - c. Integrators/Developers: Collection of tools that we built for early migrations, BPA, CAM,
2. Provide a consistent and familiar way for users to access different areas of AEM from any page or section: This allows users to quickly navigate to the areas they need, enhancing productivity. Navigation can be tailored to display relevant options and features based on a user's role and permissions. It will also make it easy for any user to know what they can or cannot access based on entitlements available or roles/permissions.

AEM Home Vision

The AEM homepage will serve as the initial touchpoint for new users, establishing the tone and setting expectations for their journey with AEM.

By providing quick access to frequently used features, tools, and resources, the home page will streamline workflows and minimize friction.

Zen statement

"Create a home for all Experience manager users to start an intuitive content creation journey and unlock their creative potential."

Plan

Personas

Developers
Marketers
Sysadmin
Business Owners

Desired Home features

1. AEM Assistant
2. Quick actions
3. Recents
4. Tasks
5. Personalized and customizable

Resources

1. [AEM Home Exploration \(Figma presentation\)](#)
2. [AEM Home Engineering](#)
